Jhoan Sebastian Diaz Ardila

Junior Fullsatck Developer

ABOUT ME

The experience I've gained in leading and completing projects has driven me to optimize the processes and resources needed to accomplish tasks. Programming has strengthened my skills in logical analysis, problem-solving, and teamwork, enabling me to guide and collaborate effectively in multidisciplinary environments. My goal is to continue growing both technically and professionally, contributing leadership to impactful projects and fostering a collaborative atmosphere.

EXPERIENCE

BootCamp Management Project

Campuslands - 2024

Python program that manages grades, students, classrooms, and teacher evaluations. The program includes features for assigning students to classrooms, grading students, and a coordination option to manage students and passing grades upon entry.

Parking Management System

Campuslands - 2024

Parking Management System using languages such as JavaScript, HTML, and CSS, which manages information related to entry, exit, occupancy, billing, and occupancy statistics.

Costume Shop

Campuslands - 2024

Relational database management system designed for the efficient administration of a costume shop. This comprehensive solution aims to streamline the organization and management of critical information related to products, customers, employees, suppliers, and business transactions.
